YOWON AI

Autonomous AI Jury Platform

Yowon AI

University Project

76	CONDITIONAL_APPROVE	LOW
Overall Score	Deployment Decision	Risk Level

Generated: July 04, 2026 08:58 UTC

Executive Summary

Overview

The system has an overall score of 76 with a CONDITIONAL_APPROVE verdict and LOW risk level. It demonstrates strengths in technical skills and innovation, but weaknesses in scalability and impact.

Evaluation Context

Item	Value
Selected Project Type	University Project
AI Detected Type	Hackathon Project (60% confidence)
Scoring Rubric Used	University Project
Evaluation Standard	Academic quality, learning outcomes, correctness, and clear communication
Score Band	Strong
Confidence	90/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	213
Code Files	168
Documentation Files	14
Presentation Files	0
Test Files	18
Configuration Files	10
Deployment Files	0
Data Files	1
Source Modules	172
Meaningful Files	191
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	81/100	A
Sentinel	71/100	B
Scale	66/100	B
Visionary	77/100	B
Guardian	70/100	B

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	LOW	||
Evidence Gaps	1	|
Deployment Readiness	76/100	||

Strengths

- Technical skills
- Innovation

Weaknesses

- Scalability
- Impact

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Modular architecture detected
- Machine learning model detected

Missing Evidence

- No deployment evidence

Deployment Roadmap

1. Implement Dockerization to improve deployment efficiency
2. Integrate with LangChain for enhanced AI capabilities
3. Conduct regular security audits to maintain high security standards

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, authentication, integrations, queues, vector databases, agent systems

Detected Technologies

- Celery
- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy
- scikit-learn

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Random Forest
- Recommendation System
- Search/Ranking

Evidence Found

- Machine learning model
- Custom algorithm
- REST API
- Database
- Authentication
- Testing
- Security implementation
- External integrations
- Queue/background jobs
- Vector database
- Agent system

Evidence Missing

- Docker/deployment

Project Type Justification

Detected Hackathon Project from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Machine learning model, Custom algorithm, REST API, Database, Authentication, Testing. Missing evidence primarily reduces confidence unless required by project type: Docker/deployment. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 12 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- technical: University rubric: missing deployment is not heavily penalized
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- scalability: University rubric: missing deployment is not heavily penalized
- innovation: Custom algorithmic implementation detected (+6)
- innovation: University rubric: applied AI/ML implementation counts as innovation
- impact: University rubric: missing deployment is not heavily penalized
- impact: University rubric: practical usefulness counts as impact without adoption metrics

Detailed Findings

Forge Analysis

Forge Analysis
Technical Score:
81/100
Strengths:
Modular architecture
Use of FastAPI and React
Weaknesses:
No CI/CD
Missing deployment files
Risks:
Lack of security measures
Single point of failure for backend

Sentinel Analysis

Sentinel Analysis
Security Score:
71/100
Risk Level:
MEDIUM
Findings:
Assert statements present
No Dockerfile found
Recommendations:
Address finding: Assert statements present
Address finding: No Dockerfile found
Confidence:

Visionary Assessment

Visionary Analysis
Innovation Score:
77/100
Scalability Score:
66/100
Differentiators:
Use of FastAPI
Integration with LangChain
Risks:
Lacks deployment details, may face issues.
Recommendations:
Document novelty, baseline comparison, and scale assumptions.

Guardian Impact Analysis

Guardian Analysis

Impact Score:
70/100
Top Risks:
Lack of deployment files
Missing pitch deck or PDF for context
Potential security vulnerabilities from assert usage
Expected Impact:
Model training data issues
API endpoint failures
Frontend-backend communication errors

Top Failure Predictions

1. Model training data issues
2. API endpoint failures
3. Frontend-backend communication errors

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
66/100
Risks:
Lacks deployment details, may face issues.
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Improve scalability by optimizing database queries
2. Enhance impact by conducting user research

Deployment Roadmap

1. Implement Dockerization to improve deployment efficiency
2. Integrate with LangChain for enhanced AI capabilities
3. Conduct regular security audits to maintain high security standards

Deployment Decision

Verdict: CONDITIONAL_APPROVE
Overall Score: 76/100
Risk Level: LOW
