YOWON AI

Autonomous AI Jury Platform

Yowon AI

University Project

60	IMPROVE	MEDIUM
Overall Score	Deployment Decision	Risk Level

Generated: July 04, 2026 08:35 UTC

Executive Summary

Overview

The overall score is 60 with an IMPROVE verdict and MEDIUM risk level. While there are some strengths, the project has significant weaknesses that need to be addressed.

Evaluation Context

Item	Value
Selected Project Type	University Project
AI Detected Type	Hackathon Project (60% confidence)
Scoring Rubric Used	University Project
Evaluation Standard	Academic quality, learning outcomes, correctness, and clear communication
Score Band	Functional
Confidence	82/100
Evidence Quality	Exceptional
Repository Completeness	100/100

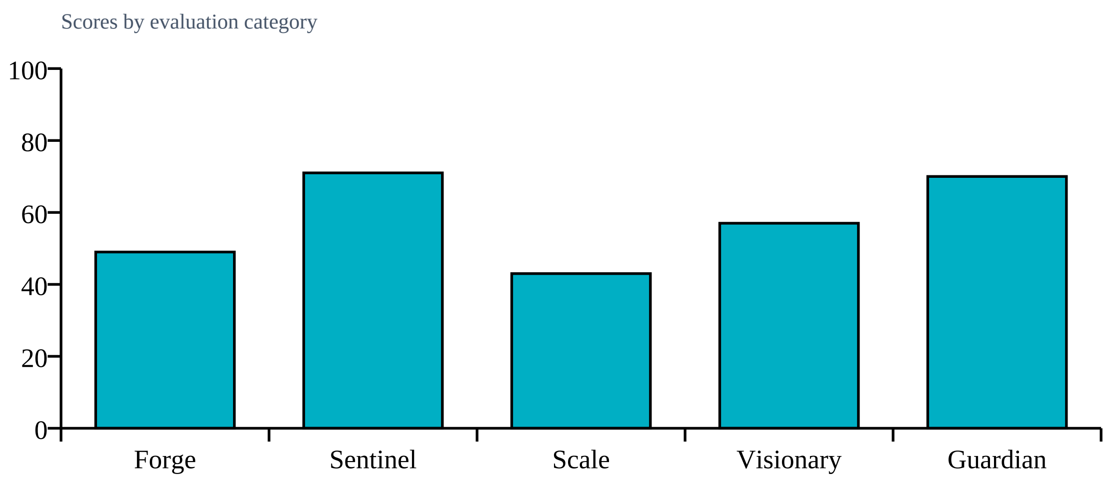
Repository Statistics

Item	Value
Total Files	213
Code Files	168
Documentation Files	14
Presentation Files	0
Test Files	18
Configuration Files	10
Deployment Files	0
Data Files	1
Source Modules	172
Meaningful Files	191
Repository Completeness Score	100

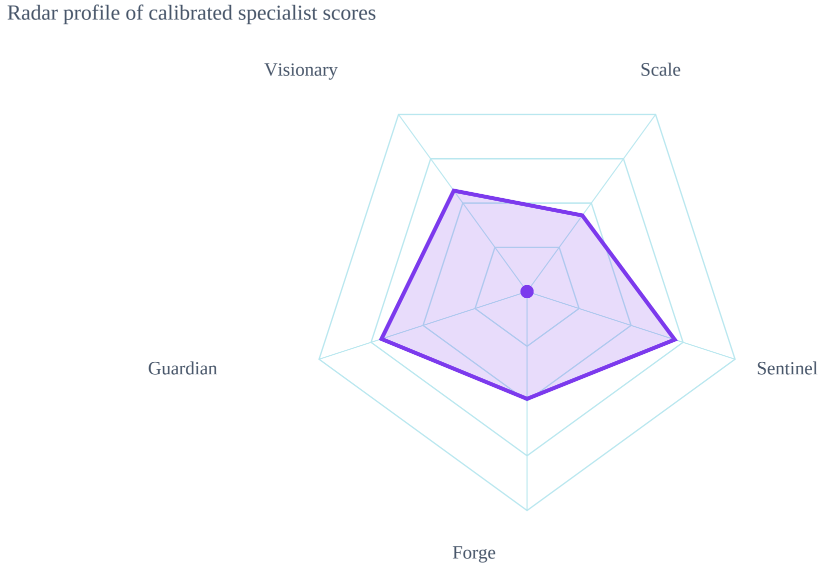
Score Table

Category	Score	Grade
Forge	49/100	D
Sentinel	71/100	B
Scale	43/100	D
Visionary	57/100	C
Guardian	70/100	B

Category Score Chart



Radar Chart



Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	MEDIUM	|||||
Evidence Gaps	1		
Deployment Readiness	60/100	||||

Strengths

- Security Health: 100.0/100
- Impact: 70

Weaknesses

- Assert statements present | No Dockerfile or deployment evidence
- Static Analysis Health: 64.3/100
- Testing Health: 56.1/100

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Modular architecture detected
- Machine learning model detected

Missing Evidence

- No deployment evidence

Deployment Roadmap

1. Review and refactor code to improve assert statement usage
2. Develop and implement automated testing framework to enhance Testing Health

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, authentication, integrations, queues, vector databases, agent systems

Detected Technologies

- Celery
- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy
- scikit-learn

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Random Forest
- Recommendation System
- Search/Ranking

Evidence Found

- Machine learning model
- Custom algorithm
- REST API
- Database
- Authentication
- Testing
- Security implementation
- External integrations
- Queue/background jobs
- Vector database
- Agent system

Evidence Missing

- Docker/deployment

Project Type Justification

Detected Hackathon Project from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Machine learning model, Custom algorithm, REST API, Database, Authentication, Testing. Missing evidence primarily reduces confidence unless required by project type: Docker/deployment. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 12 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- technical: University rubric: missing deployment is not heavily penalized
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- scalability: University rubric: missing deployment is not heavily penalized
- innovation: Custom algorithmic implementation detected (+6)
- innovation: University rubric: applied AI/ML implementation counts as innovation
- impact: University rubric: missing deployment is not heavily penalized
- impact: University rubric: practical usefulness counts as impact without adoption metrics

Detailed Findings

Forge Analysis

Forge Analysis
Technical Score:
49/100
Strengths:
None evidenced.
Weaknesses:
Forge failed — manual technical review required
Risks:
Incomplete automated technical assessment
Confidence:
15%

Sentinel Analysis

Sentinel Analysis
Security Score:
71/100
Risk Level:
MEDIUM
Findings:
Assert statements present
No Dockerfile or deployment evidence
Recommendations:
Address finding: Assert statements present
Address finding: No Dockerfile or deployment evidence
Confidence:

Visionary Assessment

Visionary Analysis
Innovation Score:
57/100
Scalability Score:
43/100
Differentiators:
None evidenced.
Risks:
Unable to assess — Visionary failure
Recommendations:
Document novelty, baseline comparison, and scale assumptions.
Confidence:

Guardian Impact Analysis

Guardian Analysis
Impact Score:

70/100
Top Risks:
Lack of deployment files
Assert statements in code
Missing CI/CD pipeline
Expected Impact:
Model training failure
API integration issues
Data input errors

Top Failure Predictions

1. Model training failure
2. API integration issues
3. Data input errors

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
43/100
Risks:
Unable to assess — Visionary failure
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement a Dockerfile and provide deployment evidence
2. Improve static analysis health by addressing identified issues

Deployment Roadmap

1. Review and refactor code to improve assert statement usage
2. Develop and implement automated testing framework to enhance Testing Health

Deployment Decision

Verdict: IMPROVE
Overall Score: 60/100
Risk Level: MEDIUM
