Open Source Project

94	ACCEPT	LOW
Overall Score	Deployment Decision	Risk Level

Generated: July 08, 2026 14:09 UTC

Executive Summary

Overview

The overall score is 94, indicating an ACCEPT verdict with a LOW risk level. The agent scores are: technical (86), security (76), scalability (85), innovation (71), and impact (72).

Evaluation Context

Item	Value
Selected Project Type	Open Source Project
AI Detected Type	Open Source Project (59% confidence)
Scoring Rubric Used	Open Source Project
Evaluation Standard	Documentation, community readiness, code quality, maintainability, and contributor experience
Score Band	Exceptional
Confidence	91/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	300
Code Files	200
Documentation Files	28
Presentation Files	0
Test Files	5
Configuration Files	47
Deployment Files	40
Data Files	0
Source Modules	202
Meaningful Files	279
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	86/100	A
Sentinel	76/100	B
Scale	85/100	A
Visionary	71/100	B
Guardian	72/100	B

Category Score Chart

Radar Chart

Radar profile of calibrated specialist scores

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	LOW	
Evidence Gaps	1	
Deployment Readiness	94/100	

Strengths

- High community engagement as indicated by the number of stars
- Use of Docker for deployment, indicating a good understanding of containerization

Weaknesses

- Static Analysis Health: 90.0/100 indicates room for improvement in static analysis
- Testing Health: 0/100 and Security Health: 0/100 indicate significant weaknesses in testing and security

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Deployment files present
- Modular architecture detected

Missing Evidence

- No additional missing evidence detected

Deployment Roadmap

1. Implement a comprehensive testing framework to improve testing health
2. Conduct regular security audits and implement patches to enhance security health
3. Develop a plan to address the low innovation score by exploring new technologies and processes

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, deployment layer, authentication, integrations, agent systems

Detected Technologies

- FastAPI
- React
- SQLAlchemy

Detected Algorithms

- Agent System
- RAG

Evidence Found

- REST API
- Database
- Authentication
- Docker/deployment
- Testing
- Security implementation
- External integrations
- Agent system

Evidence Missing

- Machine learning model
- Custom algorithm
- Queue/background jobs
- Vector database

Project Type Justification

Detected Open Source Project from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: REST API, Database, Authentication, Docker/deployment, Testing, Security implementation. Missing evidence primarily reduces confidence unless required by project type: Machine learning model, Custom algorithm, Queue/background jobs, Vector database. Community impact contributed a bounded signal (100/100, capped at 15% of final score). 9 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100

- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- technical: Open-source rubric: substantial implementation and documentation can score highly
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- impact: Open-source rubric: community activity strengthens impact evidence (+5)
- overall: Community impact signal (+15)

Detailed Findings

Forge Analysis

Forge Analysis

Technical Score:

86/100

Strengths:

High community engagement as indicated by the number of stars

Use of Docker for deployment, indicating a good understanding of containerization

Weaknesses:

Limited test coverage with only 5 test files

No explicit mention of code quality or style guidelines

Missing pitch deck or detailed documentation on innovation and impact

Risks:

Low number of tests could indicate potential issues in the codebase

Sentinel Analysis

Sentinel Analysis

Security Score:

76/100

Risk Level:

LOW

Findings:

None evidenced.

Recommendations:

Run a security review and document controls.

Confidence:

90%

Visionary Assessment

Visionary Analysis

Innovation Score:

71/100

Scalability Score:

85/100

Differentiators:

Self-hosted developer control center

Supports multiple ACP-compatible agents

Cross-repo testing skills

Risks:

Moderate risk due to lack of explicit documentation on scaling strategies.

Recommendations:

Guardian Impact Analysis

Guardian Analysis

Impact Score:

72/100

Top Risks:

- Lack of comprehensive testing
- Insufficient documentation for deployment
- No dedicated security scans or audits

Expected Impact:

- Configuration errors in docker-compose.yml
- Missing error handling in codebase
- Dependence on external services without fallbacks

Top Failure Predictions

1. Configuration errors in docker-compose.yml
2. Missing error handling in codebase
3. Dependence on external services without fallbacks

Scalability Assessment

Visionary Scalability Assessment

Scalability Score:

85/100

Risks:

Moderate risk due to lack of explicit documentation on scaling strategies.

Recommendations:

Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Improve testing health by implementing comprehensive testing strategies
2. Enhance security health by addressing vulnerabilities and implementing robust security measures

Deployment Roadmap

1. Implement a comprehensive testing framework to improve testing health
2. Conduct regular security audits and implement patches to enhance security health
3. Develop a plan to address the low innovation score by exploring new technologies and processes

Deployment Decision

Verdict: ACCEPT
Overall Score: 94/100
Risk Level: LOW
