

YOWON AI

Autonomous AI Jury Platform

Yowon AI
Hackathon Project

72	CONDITIONAL_APPROVE	MEDIUM
Overall Score	Deployment Decision	Risk Level

Generated: July 08, 2026 09:47 UTC

Executive Summary

Overview

The overall score is 72, indicating a `CONDITIONAL_APPROVE` verdict with a `MEDIUM` risk level. The agent scores are: technical (77), security (62), scalability (70), innovation (82), presentation (67), and impact (60).

Evaluation Context

Item	Value
Selected Project Type	Hackathon Project
AI Detected Type	Enterprise System (62% confidence)
Scoring Rubric Used	Hackathon Project
Evaluation Standard	Prototype quality, innovation, demo readiness, and execution under time constraints
Score Band	Strong
Confidence	96/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	285
Code Files	200
Documentation Files	26
Presentation Files	0
Test Files	32
Configuration Files	22
Deployment Files	4
Data Files	1
Source Modules	204
Meaningful Files	249
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	77/100	B
Sentinel	62/100	C
Scale	70/100	B
Visionary	82/100	A
Showcase	67/100	B
Guardian	60/100	C

Category Score Chart

Radar Chart

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	MEDIUM	
Evidence Gaps	1	
Deployment Readiness	72/100	

Strengths

- Innovation score of 82 indicates strong innovative capabilities.
- Technical expertise is high, with a score of 77.

Weaknesses

- Security score of 62 suggests room for improvement in security measures.
- Impact score of 60 indicates potential issues with the project's overall impact.

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Deployment files present
- Modular architecture detected

Missing Evidence

- No additional missing evidence detected

Deployment Roadmap

1. Review and refactor code for improved scalability and performance.
2. Enhance testing infrastructure to improve Testing Health score.
3. Implement encryption for sensitive data as a top priority.

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, deployment layer, authentication, integrations, queues, vector databases, agent systems

Detected Technologies

- Celery
- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy
- scikit-learn

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Random Forest
- Recommendation System
- Search/Ranking

Evidence Found

- Machine learning model
- Custom algorithm
- REST API
- Database
- Authentication
- Docker/deployment
- Testing
- Security implementation
- External integrations
- Queue/background jobs
- Vector database
- Agent system

Evidence Missing

- No missing implementation evidence recorded.

Project Type Justification

Detected Enterprise System from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Machine learning model, Custom algorithm, REST API, Database, Authentication, Docker/deployment. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 7 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- innovation: Custom algorithmic implementation detected (+6)

Detailed Findings

Forge Analysis

Forge Analysis
Technical Score:
77/100
Strengths:
Uses FastAPI for backend
Incorporates multiple AI agents for evaluation
Weaknesses:
Lack of production-scale operations experience
Limited test coverage (57.9%)
Risks:
High static security risk identified
No explicit mention of data privacy or security measures

Sentinel Analysis

Sentinel Analysis
Security Score:
62/100
Risk Level:
MEDIUM
Findings:
Missing secure environment variable handling in Dockerfile
No encryption for sensitive data
Recommendations:
Address finding: Missing secure environment variable handling in Dockerfile
Address finding: No encryption for sensitive data
Confidence:

Visionary Assessment

Visionary Analysis
Innovation Score:
82/100
Scalability Score:
70/100
Differentiators:
Multi-agent evaluation system
Real-time SSE progress streaming
Use of local Ollama models
Risks:
Risk of limited agent parallelism and potential single point of failure in backend
Recommendations:

Guardian Impact Analysis

Guardian Analysis

Impact Score:
60/100
Top Risks:
Security vulnerabilities due to static analysis findings
Potential runtime errors without comprehensive testing
Lack of production-scale deployment experience
Expected Impact:
Docker configuration issues
Missing error handling in backend
Inadequate test coverage

Top Failure Predictions

1. Docker configuration issues
2. Missing error handling in backend
3. Inadequate test coverage

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
70/100
Risks:
Risk of limited agent parallelism and potential single point of failure in backend
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Showcase Review

Showcase Analysis
Presentation Score:
67/100
Strengths:
Clear problem statement addressing current evaluation process inefficiencies
Innovative solution leveraging AI for project assessment
Improvements:
Enhance clarity and structure of the presentation to better align with hackathon goals
Include more technical details and metrics in the slides to support claims about code quality and security
Confidence:
85%

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement secure environment variable handling in Dockerfile to address security concerns.
2. Encrypt sensitive data to enhance security and meet best practices.

Deployment Roadmap

1. Review and refactor code for improved scalability and performance.
2. Enhance testing infrastructure to improve Testing Health score.
3. Implement encryption for sensitive data as a top priority.

Deployment Decision

Verdict: CONDITIONAL_APPROVE
Overall Score: 72/100
Risk Level: MEDIUM
