

YOWON AI

Autonomous AI Jury Platform

Yowon Ai
Research Project

68	IMPROVE	MEDIUM
Overall Score	Deployment Decision	Risk Level

Generated: July 09, 2026 04:44 UTC

Executive Summary

Overview

The overall score is 68, indicating a need for improvement. The risk level is medium, and the verdict is IMPROVE.

Evaluation Context

Item	Value
Selected Project Type	Research Project
AI Detected Type	Enterprise System (62% confidence)
Scoring Rubric Used	Research Project
Evaluation Standard	Research novelty, academic contribution, experimental rigor, reproducibility, baseline benchmarking, and publication potential
Score Band	Strong
Confidence	91/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	285
Code Files	200
Documentation Files	26
Presentation Files	0
Test Files	32
Configuration Files	22
Deployment Files	4
Data Files	1
Source Modules	204
Meaningful Files	249
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	72/100	B
Sentinel	62/100	C
Scale	63/100	C
Visionary	67/100	B
Guardian	67/100	B

Category Score Chart

Radar Chart

Radar profile of calibrated specialist scores

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	MEDIUM	
Evidence Gaps	2	
Deployment Readiness	68/100	

Strengths

- The technical skills are strong with a score of 72.

Weaknesses

- Security-related dependencies were not found in the repository, which may indicate a weakness in security measures. The overall security health is 82.0/100, but this could be improved.
- Testing health is low at 57.9/100, indicating potential issues with testing processes.

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Deployment files present
- Modular architecture detected

Missing Evidence

- No baseline comparison (-10)
- No citation or literature-grounding evidence (-8)

Deployment Roadmap

1. Review and update the repository to include a .env file for secure configuration management.
2. Integrate multi-agent evaluation system with real-time SSE progress streaming for enhanced performance monitoring.
3. Implement static analysis tools to improve code quality and security, aiming for a Static Analysis Health score of at least 80/100.

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, deployment layer, authentication, integrations, queues, vector databases, agent systems

Detected Technologies

- Celery
- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy
- scikit-learn

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Random Forest
- Recommendation System
- Search/Ranking

Evidence Found

- Machine learning model
- Custom algorithm
- REST API
- Database
- Authentication
- Docker/deployment
- Testing
- Security implementation
- External integrations
- Queue/background jobs
- Vector database
- Agent system

Evidence Missing

- No missing implementation evidence recorded.

Project Type Justification

Detected Enterprise System from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Machine learning model, Custom algorithm, REST API, Database, Authentication, Docker/deployment. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 9 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- technical: No baseline comparison (-10)
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- innovation: Custom algorithmic implementation detected (+6)
- innovation: No citation or literature-grounding evidence (-8)

Detailed Findings

Forge Analysis

Forge Analysis

Technical Score:

72/100

Strengths:

Multi-agent architecture for evaluation

Use of FastAPI backend for API services

Real-time SSE progress streaming

Weaknesses:

Limited documentation and comments in codebase

No CI/CD setup found

Missing pitch deck or PDF for detailed project description

Risks:

Sentinel Analysis

Sentinel Analysis

Security Score:

62/100

Risk Level:

MEDIUM

Findings:

Missing .env file in repository

No security-related dependencies found

Recommendations:

Address finding: Missing .env file in repository

Address finding: No security-related dependencies found

Confidence:

Visionary Assessment

Visionary Analysis

Innovation Score:

67/100

Scalability Score:

63/100

Differentiators:

Multi-agent evaluation system

Real-time SSE progress streaming

Risks:

Risk of dependency on external services and limited parallelism

Recommendations:

Document novelty, baseline comparison, and scale assumptions.

Guardian Impact Analysis

Guardian Analysis

Impact Score:
67/100
Top Risks:
Potential security vulnerabilities in dependencies
Lack of comprehensive error handling and logging
Insufficient testing coverage for production readiness
Expected Impact:
Model dependency issues due to external LLM services
Data handling errors in real-time SSE streaming
Configuration errors in Docker setup

Top Failure Predictions

1. Model dependency issues due to external LLM services
2. Data handling errors in real-time SSE streaming
3. Configuration errors in Docker setup

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
63/100
Risks:
Risk of dependency on external services and limited parallelism
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement security-related dependencies to improve the security posture of the system.
2. Improve testing processes and health by addressing the identified issues.

Deployment Roadmap

1. Review and update the repository to include a .env file for secure configuration management.
2. Integrate multi-agent evaluation system with real-time SSE progress streaming for enhanced performance monitoring.
3. Implement static analysis tools to improve code quality and security, aiming for a Static Analysis Health score of at least 80/100.

Deployment Decision

Verdict: IMPROVE
Overall Score: 68/100
Risk Level: MEDIUM
