Startup Pitch

43	REJECT	HIGH
Overall Score	Deployment Decision	Risk Level

Generated: July 17, 2026 05:30 UTC

Executive Summary

Overview

The overall score is 43, indicating a REJECT verdict with HIGH risk level. The agent scores are: technical (77), security (62), scalability (66), innovation (70), and impact (7).

Evaluation Context

Item	Value
Selected Project Type	Startup Pitch
AI Detected Type	Enterprise System (62% confidence)
Scoring Rubric Used	Startup Pitch
Evaluation Standard	Market viability, business model, differentiation, evidence, and execution risk
Score Band	Functional
Confidence	81/100
Evidence Quality	Excellent
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	283
Code Files	224
Documentation Files	16
Presentation Files	0
Test Files	28
Configuration Files	10
Deployment Files	4
Data Files	1
Source Modules	227
Meaningful Files	251
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	77/100	B
Sentinel	62/100	C
Scale	66/100	B
Visionary	70/100	B
Guardian	7/100	F

Category Score Chart

Radar Chart

Radar profile of calibrated specialist scores

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	HIGH	
Evidence Gaps	3	
Deployment Readiness	43/100	

Strengths

- Modular architecture with clear separation of frontend and backend
- Use of modern frameworks like FastAPI for the backend and Vite for the frontend

Weaknesses

- Missing .env file in repository
- No secrets management strategy mentioned

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Deployment files present
- Modular architecture detected

Missing Evidence

- No competitive analysis evidence (-7)
- No market or customer validation evidence (-28)
- No business model evidence (-10)

Deployment Roadmap

1. Improve overall score by addressing weaknesses and implementing recommended fixes
2. Enhance technical skills through training or hiring experts
3. Investigate and implement additional security measures to improve Security Health

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, deployment layer, authentication, integrations, agent systems

Detected Technologies

- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Recommendation System
- Search/Ranking

Evidence Found

- Custom algorithm
- REST API
- Database
- Authentication
- Docker/deployment
- Testing
- Security implementation
- External integrations
- Agent system

Evidence Missing

- Machine learning model
- Queue/background jobs
- Vector database

Project Type Justification

Detected Enterprise System from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Custom algorithm, REST API, Database, Authentication, Docker/deployment, Testing. Missing evidence primarily reduces confidence unless required by project type: Machine learning model, Queue/background jobs, Vector database. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 11 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- innovation: Custom algorithmic implementation detected (+6)
- innovation: No competitive analysis evidence (-7)
- impact: Startup impact evidence unavailable: score capped at 45
- impact: No market or customer validation evidence (-28)
- impact: No business model evidence (-10)

Detailed Findings

Forge Analysis

Forge Analysis
Technical Score:
77/100
Strengths:
Modular architecture with clear separation of frontend and backend
Use of modern frameworks like FastAPI for the backend and Vite for the frontend
Good documentation presence
Weaknesses:
Missing deployment instructions in README
No CI/CD pipeline setup
Limited test coverage (55.0%)
Risks:

Sentinel Analysis

Sentinel Analysis
Security Score:
62/100
Risk Level:
MEDIUM
Findings:
Missing .env file in repository
No secrets management strategy mentioned
Recommendations:
Address finding: Missing .env file in repository
Address finding: No secrets management strategy mentioned
Confidence:

Visionary Assessment

Visionary Analysis
Innovation Score:
70/100
Scalability Score:
66/100
Differentiators:
Multi-agent evaluation system
Real-time SSE progress streaming
Use of local Ollama models
Risks:
Risk of dependency on external services and limited test coverage
Recommendations:

Guardian Impact Analysis

Guardian Analysis

Impact Score:

7/100

Top Risks:

Lack of production deployment experience

Insufficient test coverage for critical functionalities

Dependency on external services with potential outages

Expected Impact:

Backend service unavailability due to Docker configuration issues

Data integrity issues from missing data validation

Security vulnerabilities from exposed secrets

Top Failure Predictions

1. Backend service unavailability due to Docker configuration issues
2. Data integrity issues from missing data validation
3. Security vulnerabilities from exposed secrets

Scalability Assessment

Visionary Scalability Assessment

Scalability Score:

66/100

Risks:

Risk of dependency on external services and limited test coverage

Recommendations:

Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement a secrets management strategy to address security concerns
2. Include a .env file in the repository to store sensitive information securely

Deployment Roadmap

1. Improve overall score by addressing weaknesses and implementing recommended fixes
2. Enhance technical skills through training or hiring experts
3. Investigate and implement additional security measures to improve Security Health

Deployment Decision

Verdict: REJECT

Overall Score: 43/100

Risk Level: HIGH
