

YOWON AI

Autonomous AI Jury Platform

Yowon ai
Hackathon Project

71	CONDITIONAL_APPROVE	MEDIUM
Overall Score	Deployment Decision	Risk Level

Generated: July 11, 2026 05:54 UTC

Executive Summary

Overview

The overall score is 71, indicating a `CONDITIONAL_APPROVE` verdict with a `MEDIUM` risk level. The agent scores are: technical (79), security (62), scalability (63), innovation (75), presentation (58), and impact (67).

Evaluation Context

Item	Value
Selected Project Type	Hackathon Project
AI Detected Type	Enterprise System (62% confidence)
Scoring Rubric Used	Hackathon Project
Evaluation Standard	Prototype quality, innovation, demo readiness, and execution under time constraints
Score Band	Strong
Confidence	94/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	258
Code Files	202
Documentation Files	15
Presentation Files	0
Test Files	27
Configuration Files	10
Deployment Files	4
Data Files	1
Source Modules	205
Meaningful Files	228
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	79/100	B
Sentinel	62/100	C
Scale	63/100	C
Visionary	75/100	B
Showcase	58/100	C
Guardian	67/100	B

Category Score Chart

Radar Chart

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	MEDIUM	
Evidence Gaps	1	
Deployment Readiness	71/100	

Strengths

- Modular architecture with clear separation of frontend and backend
- Use of modern frameworks like FastAPI for the backend and Vite + Tailwind for the frontend

Weaknesses

- Missing secure configuration management for secrets in .env.example file
- No explicit security testing or scanning performed

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Deployment files present
- Modular architecture detected

Missing Evidence

- No additional missing evidence detected

Deployment Roadmap

1. Review and implement secure configuration management for secrets
2. Schedule explicit security testing and scanning
3. Update documentation to reflect new security measures

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, deployment layer, authentication, integrations, agent systems

Detected Technologies

- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Recommendation System
- Search/Ranking

Evidence Found

- Custom algorithm
- REST API
- Database
- Authentication
- Docker/deployment
- Testing
- Security implementation
- External integrations
- Agent system

Evidence Missing

- Machine learning model
- Queue/background jobs
- Vector database

Project Type Justification

Detected Enterprise System from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Custom algorithm, REST API, Database, Authentication, Docker/deployment, Testing. Missing evidence primarily reduces confidence unless required by project type: Machine learning model, Queue/background jobs, Vector database. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 7 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- innovation: Custom algorithmic implementation detected (+6)

Detailed Findings

Forge Analysis

Forge Analysis
Technical Score:
79/100
Strengths:
Modular architecture with clear separation of frontend and backend
Use of modern frameworks like FastAPI for the backend and Vite + Tailwind for the frontend
Good documentation presence
Weaknesses:
Lack of production-scale security measures
Limited test coverage (55.0/100)
No explicit mention of CI/CD pipeline or deployment strategies
Risks:

Sentinel Analysis

Sentinel Analysis
Security Score:
62/100
Risk Level:
MEDIUM
Findings:
Missing secure configuration management for secrets in .env.example file
No explicit security testing or scanning performed
Recommendations:
Address finding: Missing secure configuration management for secrets in .env.example file
Address finding: No explicit security testing or scanning performed
Confidence:

Visionary Assessment

Visionary Analysis
Innovation Score:
75/100
Scalability Score:
63/100
Differentiators:
Multi-agent evaluation system
Real-time SSE progress streaming
Risks:
Risk of dependency on local Ollama models for scalability
Recommendations:
Document novelty, baseline comparison, and scale assumptions.

Guardian Impact Analysis

Guardian Analysis

Impact Score:
67/100
Top Risks:
Lack of comprehensive error handling and logging
Inadequate test coverage leading to potential runtime errors
Static security analysis revealing sensitive information exposure
Expected Impact:
Backend service failure due to unhandled exceptions
Data integrity issues from missing validation checks
Security vulnerabilities from exposed secrets in environment variables

Top Failure Predictions

1. Backend service failure due to unhandled exceptions
2. Data integrity issues from missing validation checks
3. Security vulnerabilities from exposed secrets in environment variables

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
63/100
Risks:
Risk of dependency on local Ollama models for scalability
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Showcase Review

Showcase Analysis
Presentation Score:
58/100
Strengths:
Clear problem statement addressing current evaluation process inefficiencies
Use of AI for project evaluation demonstrates innovation potential
Improvements:
Need to enhance clarity in the technical aspects and architecture description
Improve test coverage and documentation for better maintainability
Confidence:
70%

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement secure configuration management for secrets
2. Perform explicit security testing and scanning

Deployment Roadmap

1. Review and implement secure configuration management for secrets
2. Schedule explicit security testing and scanning
3. Update documentation to reflect new security measures

Deployment Decision

Verdict: CONDITIONAL_APPROVE
Overall Score: 71/100
Risk Level: MEDIUM
