University Project

76	CONDITIONAL_APPROVE	LOW
Overall Score	Deployment Decision	Risk Level

Generated: July 04, 2026 08:10 UTC

Executive Summary

Overview

The project has an overall score of 76 with a `CONDITIONAL_APPROVE` verdict and LOW risk level. It demonstrates strengths in technical implementation, innovation, and impact, but falls short in security and scalability.

Evaluation Context

Item	Value
Selected Project Type	University Project
AI Detected Type	Hackathon Project (60% confidence)
Scoring Rubric Used	University Project
Evaluation Standard	Academic quality, learning outcomes, correctness, and clear communication
Score Band	Strong
Confidence	90/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	213
Code Files	168
Documentation Files	14
Presentation Files	0
Test Files	18
Configuration Files	10
Deployment Files	0
Data Files	1
Source Modules	172
Meaningful Files	191
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	81/100	A
Sentinel	71/100	B
Scale	66/100	B
Visionary	77/100	B
Guardian	70/100	B

Category Score Chart

Radar Chart

Radar profile of calibrated specialist scores

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	LOW	
Evidence Gaps	1	
Deployment Readiness	76/100	

Strengths

- Modular architecture
- Use of FastAPI and React
- Assert statements present

Weaknesses

- No Dockerfile or deployment evidence

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Modular architecture detected
- Machine learning model detected

Missing Evidence

- No deployment evidence

Deployment Roadmap

1. Refactor code to improve scalability
2. Integrate additional security features, such as encryption and access controls

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, authentication, integrations, queues, vector databases, agent systems

Detected Technologies

- Celery
- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy
- scikit-learn

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Random Forest
- Recommendation System
- Search/Ranking

Evidence Found

- Machine learning model
- Custom algorithm
- REST API
- Database
- Authentication
- Testing
- Security implementation
- External integrations
- Queue/background jobs
- Vector database
- Agent system

Evidence Missing

- Docker/deployment

Project Type Justification

Detected Hackathon Project from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Machine learning model, Custom algorithm, REST API, Database, Authentication, Testing. Missing evidence primarily reduces confidence unless required by project type: Docker/deployment. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 12 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- technical: University rubric: missing deployment is not heavily penalized
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- scalability: University rubric: missing deployment is not heavily penalized
- innovation: Custom algorithmic implementation detected (+6)
- innovation: University rubric: applied AI/ML implementation counts as innovation
- impact: University rubric: missing deployment is not heavily penalized
- impact: University rubric: practical usefulness counts as impact without adoption metrics

Detailed Findings

Forge Analysis

Forge Analysis

Technical Score:

81/100

Strengths:

Modular architecture

Use of FastAPI and React

Weaknesses:

No CI/CD

Missing deployment files

Risks:

Lack of automated testing coverage

Single Ollama model dependency

Sentinel Analysis

Sentinel Analysis

Security Score:

71/100

Risk Level:

MEDIUM

Findings:

Assert statements present

No Dockerfile or deployment evidence

Recommendations:

Address finding: Assert statements present

Address finding: No Dockerfile or deployment evidence

Confidence:

Visionary Assessment

Visionary Analysis

Innovation Score:

77/100

Scalability Score:

66/100

Differentiators:

Use of FastAPI for backend

Integration with LangChain

Risks:

Limited deployment files, potential scaling issues

Recommendations:

Document novelty, baseline comparison, and scale assumptions.

Guardian Impact Analysis

Guardian Analysis

Impact Score:
70/100
Top Risks:
Lack of deployment files
Unoptimized byte code usage
Missing CI/CD pipeline
Expected Impact:
API downtime due to backend issues
Data corruption in database
Model prediction errors

Top Failure Predictions

1. API downtime due to backend issues
2. Data corruption in database
3. Model prediction errors

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
66/100
Risks:
Limited deployment files, potential scaling issues
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement a Dockerfile for containerization and deployment
2. Enhance security measures to meet industry standards

Deployment Roadmap

1. Refactor code to improve scalability
2. Integrate additional security features, such as encryption and access controls

Deployment Decision

Verdict: `CONDITIONAL_APPROVE`
Overall Score: 76/100
Risk Level: LOW
