

YOWON AI

Autonomous AI Jury Platform

YOWON AI
Hackathon Project

68	IMPROVE	MEDIUM
Overall Score	Deployment Decision	Risk Level

Generated: July 04, 2026 04:54 UTC

Executive Summary

Overview

The overall score is 68 with an IMPROVE verdict and MEDIUM risk level. The system has strengths in technical skills (81) and innovation (80), but weaknesses in security (68) and scalability (74).

Evaluation Context

Item	Value
Selected Project Type	Auto Detect
AI Detected Type	Hackathon Project (60% confidence)
Scoring Rubric Used	Hackathon Project
Evaluation Standard	Prototype quality, innovation, demo readiness, and execution under time constraints
Score Band	Strong
Confidence	90/100
Evidence Quality	Exceptional
Repository Completeness	100/100

Repository Statistics

Item	Value
Total Files	213
Code Files	168
Documentation Files	14
Presentation Files	0
Test Files	18
Configuration Files	10
Deployment Files	0
Data Files	1
Source Modules	172
Meaningful Files	191
Repository Completeness Score	100

Score Table

Category	Score	Grade
Forge	81/100	A
Sentinel	68/100	B
Scale	74/100	B
Visionary	80/100	A
Guardian	69/100	B

Category Score Chart

Radar Chart

Radar profile of calibrated specialist scores

Risk Visualization

Risk Area	Signal	Risk Level
Security Risk	MEDIUM	
Evidence Gaps	1	
Deployment Readiness	68/100	

Strengths

- Technical skills
- Innovation

Weaknesses

- Security
- Scalability

Positive Factors

- Source code detected
- Documentation present
- Automated testing detected
- Machine learning implementation
- Dataset artifacts detected
- Backend architecture present
- Modular architecture detected
- Machine learning model detected

Missing Evidence

- No deployment evidence

Deployment Roadmap

1. Refactor code to utilize modular architecture and custom algorithms.
2. Integrate RAG, Agent System for improved performance and scalability.

Architecture Summary

Detected frontend, backend, database, ml pipeline, api layer, authentication, integrations, queues, vector databases, agent systems

Detected Technologies

- Celery
- ChromaDB
- CrewAI
- FastAPI
- LangChain
- React
- SQLAlchemy
- scikit-learn

Detected Algorithms

- Agent System
- Graph Algorithm
- RAG
- Random Forest
- Recommendation System
- Search/Ranking

Evidence Found

- Machine learning model
- Custom algorithm
- REST API
- Database
- Authentication
- Testing
- Security implementation
- External integrations
- Queue/background jobs
- Vector database
- Agent system

Evidence Missing

- Docker/deployment

Project Type Justification

Detected Hackathon Project from code/docs/repository signals.

Calibration Explanation

Implementation evidence increased confidence: Machine learning model, Custom algorithm, REST API, Database, Authentication, Testing. Missing evidence primarily reduces confidence unless required by project type: Docker/deployment. Community impact contributed a bounded signal (6/100, capped at 15% of final score). 8 calibration adjustment(s) were applied.

Confidence Sources

- Repository completeness: 100/100
- Documentation quality: present
- Evidence coverage: 100/100
- Agent agreement: inferred from calibrated specialist scores
- Dataset artifact detected

Penalties

- technical: Dataset artifacts strengthen technical evidence (+4)
- technical: REST/API implementation detected (+4)
- technical: Database integration detected (+3)
- technical: External integration evidence detected (+3)
- security: Authentication implementation detected (+4)
- scalability: Advanced architecture component detected (+5)
- innovation: Custom algorithmic implementation detected (+6)
- impact: Unable to determine impact level from repository evidence.

Detailed Findings

Forge Analysis

Forge Analysis
Technical Score:
81/100
Strengths:
Modular architecture
Use of FastAPI and React
Weaknesses:
No deployment files
Missing pitch deck or PDF
Risks:
Lack of production readiness checks
No security measures in code

Sentinel Analysis

Sentinel Analysis
Security Score:
68/100
Risk Level:
MEDIUM
Findings:
Assert statements present
No Dockerfile found
Recommendations:
Address finding: Assert statements present
Address finding: No Dockerfile found
Confidence:

Visionary Assessment

Visionary Analysis
Innovation Score:
80/100
Scalability Score:
74/100
Differentiators:
Custom algorithms
Integration of RAG, Agent System
Risks:
Needs Docker for deployment
Recommendations:
Document novelty, baseline comparison, and scale assumptions.

Guardian Impact Analysis

Guardian Analysis

Impact Score:
69/100
Top Risks:
Lack of deployment files
Unoptimized code with assert statements
No CI/CD setup
Expected Impact:
API downtime
Data corruption
Model prediction errors

Top Failure Predictions

1. API downtime
2. Data corruption
3. Model prediction errors

Scalability Assessment

Visionary Scalability Assessment
Scalability Score:
74/100
Risks:
Needs Docker for deployment
Recommendations:
Validate capacity assumptions with load tests and deployment evidence.

Cross Examination Results

No major contradictions detected across specialist agents.

Final Verdict

Blocking Issues

- No blocking issues recorded.

Recommended Fixes

1. Implement a Dockerfile to improve deployment efficiency.
2. Enhance security measures to meet industry standards.

Deployment Roadmap

1. Refactor code to utilize modular architecture and custom algorithms.
2. Integrate RAG, Agent System for improved performance and scalability.

Deployment Decision

Verdict: IMPROVE
Overall Score: 68/100
Risk Level: MEDIUM
